

The Academic STARS Retention Model: An Empirical Investigation of its Effectiveness

Lathardus Goggins II, Ed.D.

Soup and Substance Series

February 11, 2004

Introduction - Rites of Passage

Arnold Van Gennep's 1906 publication of "Les rites de passage" coined the phrase rites of passage.

Mensah (1993) defined rites of passage as:

Those structures, rituals, and ceremonies by which age-class members or individuals in a group successfully come to know who they are and what they are about, the purpose and meaning for their existence, as they proceed from one clearly defined state of existence to the next state of passage in their lives. (p. 62).

Introduction - Rites of Passage

The Rites of Passage Process:

1. Preparation is when the initiate learns what is to be member of that culture/society and develops an understanding of necessary skills, responsibilities, and expectations in order to fulfill his or her purpose within culture/society and stage of life.
2. Separation, the initiate demonstrates the ability to perform expected skills and responsibilities. Separation is the stage where initiates begin to separate from “old ways” and perfect new skills and concepts with guidance from elders.
3. Transition is the phase that an initiate enters as a “non-member” and emerges as a “member.”
4. Reincorporation is the phase when a newly transitioned member is accepted back into the culture/society by the community, and expected to carry out his or her purpose within the culture/society, thereby maintaining it.

Introduction - Rites of Passage

- The Kupita services are delivered in four phases. Each phase corresponds to one of the stages of the rites of passage process.
- Phase I, the preparation stage, is a 7-week on-campus summer college transition experience. Students are introduced to an African-Centered rites of passage model, and are enrolled in College English I, Black Experience I, then College English II, and Black Experience II.
- Phase II, the separation stage, is the freshmen year transition experience. Students attend workshops and meetings to discuss prevailing concerns and issues.
- Phase III, the transition stage, is the mentoring program available to students throughout their enrollment at the University.
- Phase IV, the reincorporation stage, is the Karamu Ya Wahitimu, a graduation celebration of the African American and African graduate and undergraduate students.

Introduction - Academic STARS (Students Achieving and Reaching Success)

- The Kupita/Transiciones Model was created to support their academic and social needs. The guiding principles, based on Kwanzaa's Nguzo Saba were used to ensure a holistic approach to the students' needs.

The Basic Assumptions of the Kupita/Transiciones Model

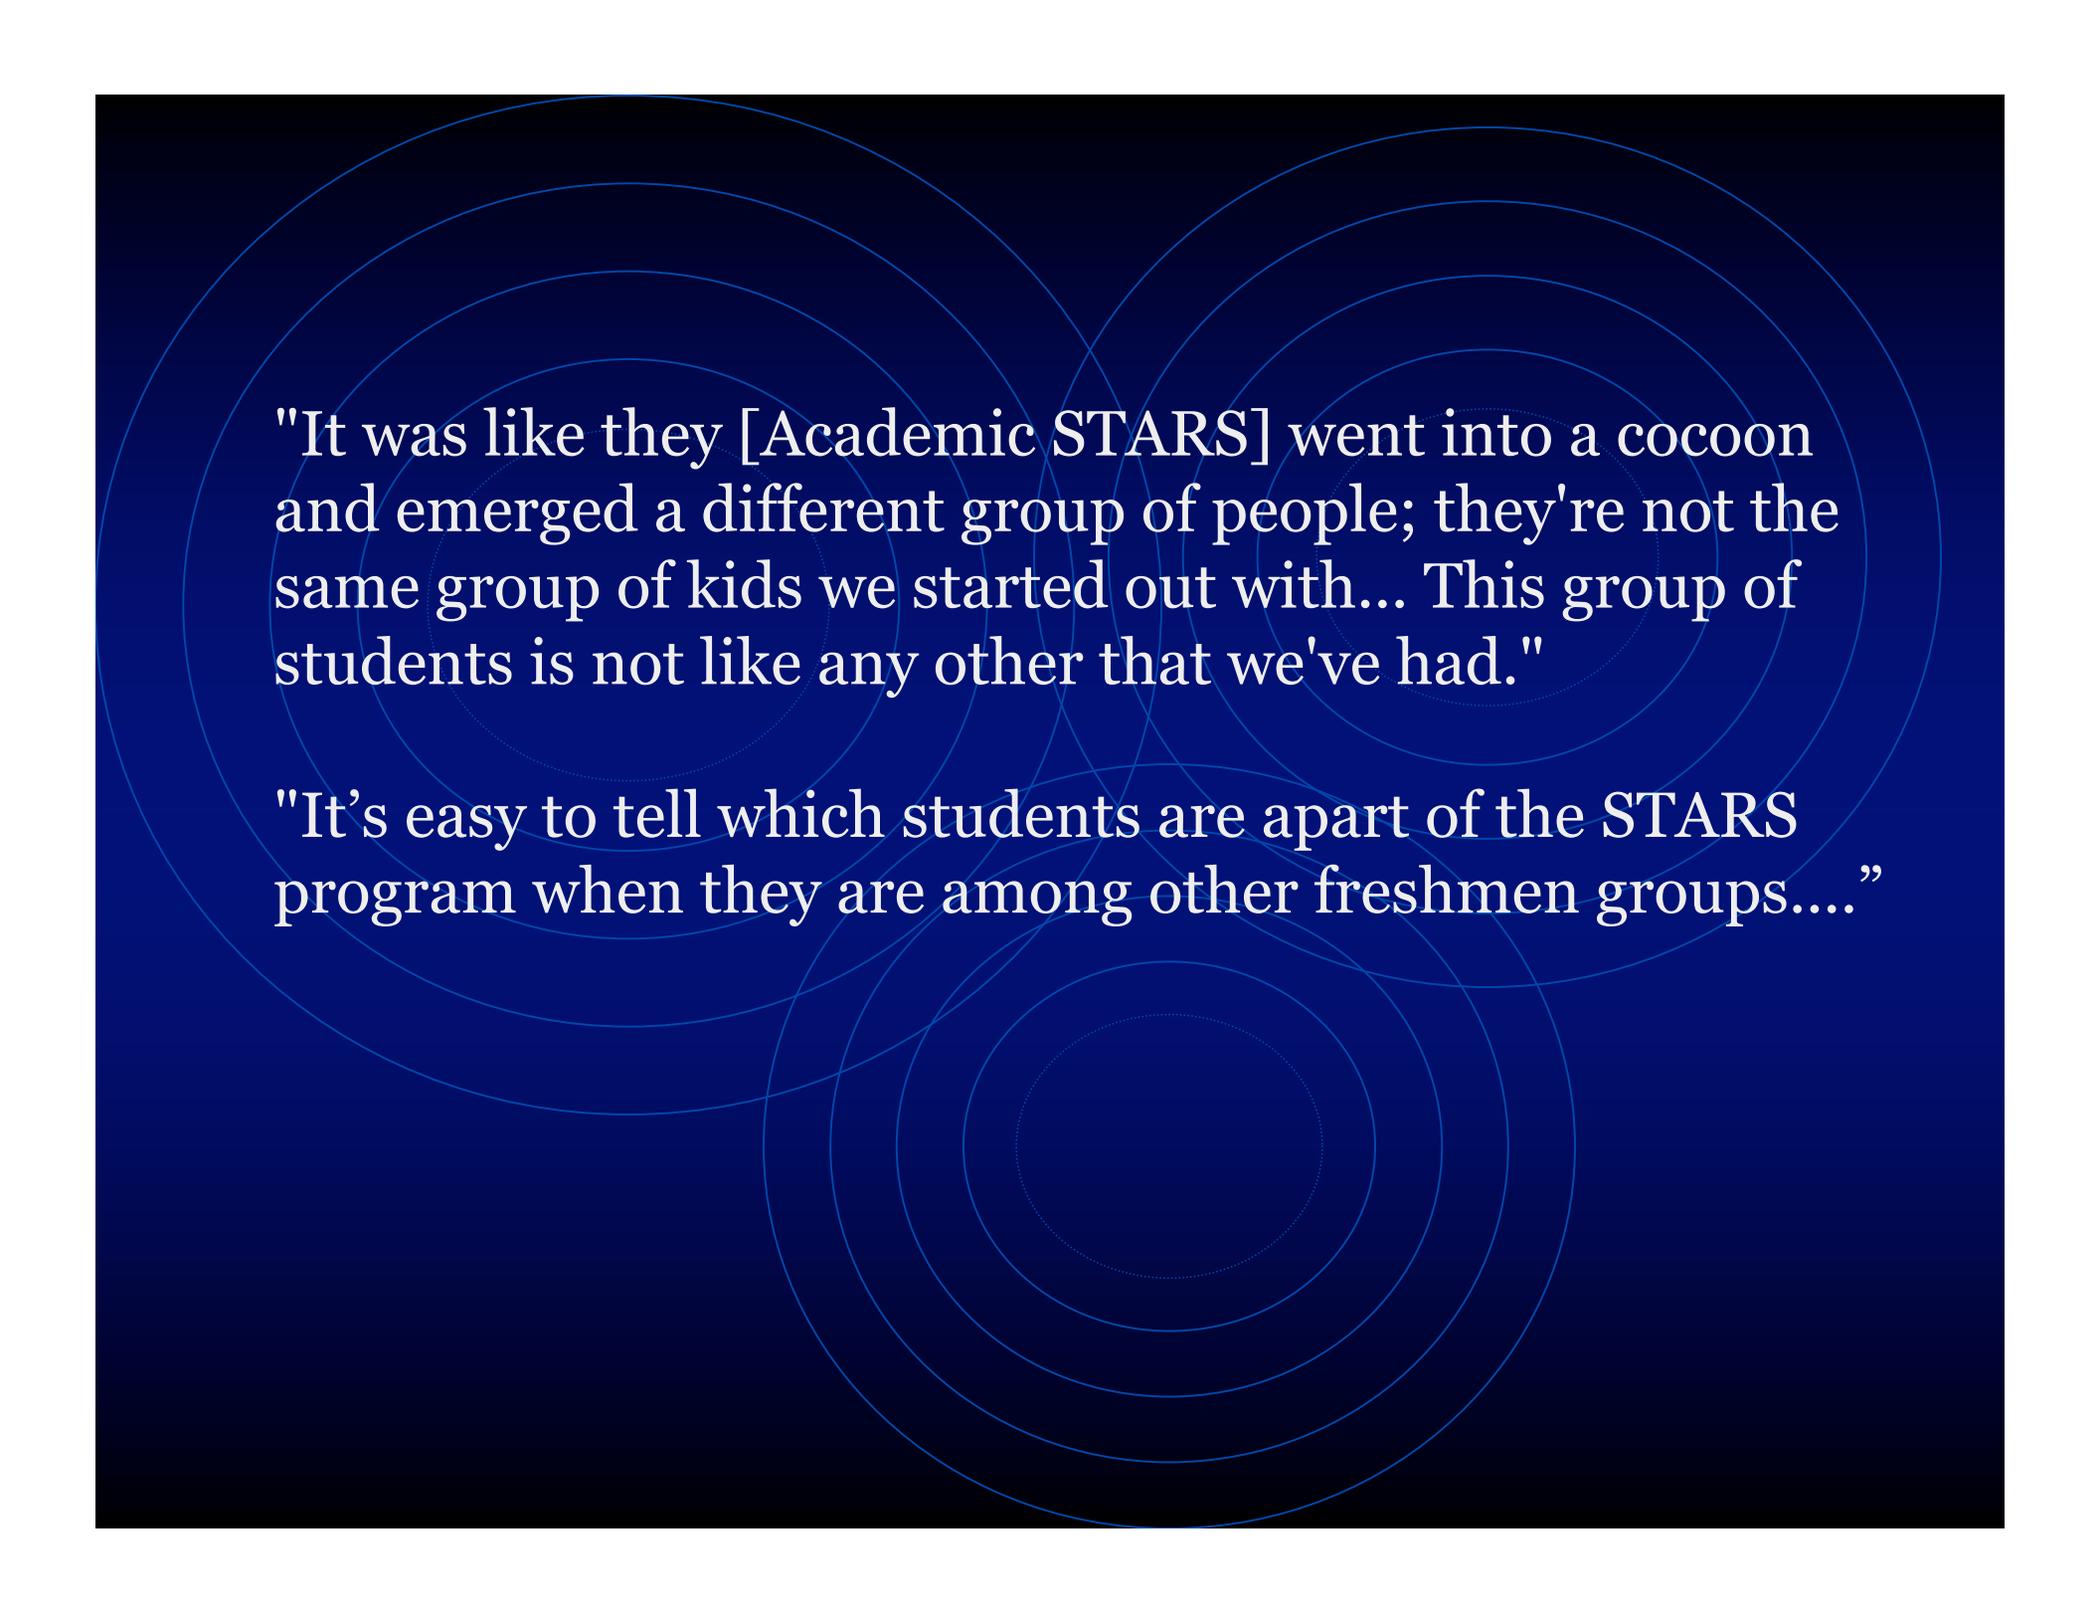

1. To increase the retention and graduation rates of minority students, a process is needed to equip minority students with skills and experiences that are consistent with academic success and retention factors;
2. Those factors include developing authentic sense of self, committing to a purpose, building meaningful relationships with peers, faculty and staff, and the ability to identify and utilize academic resources;
3. The development of healthy social networks and sense of self are rooted in positive identity development; and
4. Healthy identity development takes place within an “authentic” socio-cultural context.

Academic STARS

- The Academic STARS (Students Achieving and Reaching Success) is the initiative to bridging African American students into the university. The Academic STARS program is the central component of Kupita model.
- Only the students in Academic STARS participate in the African-Centered rites of passage summer bridge experience.

The “New” Academic STARS

- In 1995, the “new” Academic STARS students entered the selected institution through an African-Centered Rites of Passage process.
- In an interview conducted in 1995 with the Director and Assistant Director of the Office of Cultural Diversity (now the Student Multicultural Center), both stated that there was something “unique” about the new Academic STARS.

"It was like they [Academic STARS] went into a cocoon and emerged a different group of people; they're not the same group of kids we started out with... This group of students is not like any other that we've had."

"It's easy to tell which students are apart of the STARS program when they are among other freshmen groups...."

Research Question

- Are students who have experienced the KSU Academic STARS African Centered Rites of Passage process performing better academically than their African American peers who have not participated in Academic STARS as measured by final accumulative GPA, retention, and graduation, when controlling for gender, SAT, and high school GPA?

Literature Review

- There is ample and relevant literature that supports various aspects of the rites of passage model, the literature specifically examining the use of rites of passage model and process as a tool for college student development and retention is sparse. A query of ERIC, Education Abstracts, and the OhioLINK Electronic Journal Center databases, which includes more than 3,000 journals titles from 1966 to the present, produced five references regarding rites of passage and retaining college students.

Rites of Passage in Higher Education

Butler and Glennen (1991) asserted that colleges and universities should recognize the importance of rites of passage rituals for marking the successful passage from one position in the social structure to another. In addition, colleges and universities should establish sanctioned, rigorous, initiation rituals for new students as rites of passage to increase the students' involvement and sense of belonging and responsibility in their new collegiate community.

Rites of Passage in Higher Education

Shere (1993) discussed a summer transitional program at University of Delaware. She found that students, who progressed through the rites of passage process (on their own), generally felt a high comfort level with the campus, and felt integrated both academically and socially to the campus.

Rites of Passage in Higher Education

Tinto's (1988) model of student departure (graduation) is based on Van Gennep's work on the rites of passage. Tinto stated:

We begin our development of a theory of student departure by turning to the field of social anthropology and studies of the process of establishing membership in traditional societies. Specifically, we turn to the work of Arnold Van Gennep and his study of the rites of passage in tribal societies. ... He saw life as being comprised of series of passages leading individuals from birth to death and from membership in one group or status to another. (p. 91)

Rites of Passage in Higher Education

Tierney (1992) expressed some serious concerns with its use for minority students. Tierney suggested that Tinto's use of the rites of passage concepts and ritual extracts them from their cultural foundation. Tierney states:

When Van Gennep developed his functionalist theory, he never anticipated that it would be used to explain one's culture's ritual to initiate a member of another culture. ... One cannot speak of ritual without first considering the cultural contexts in which that ritual is embedded. (p. 608)

Research Design

- Ex Post Facto Design
- According to Kerlinger (1986) the three major weaknesses of the ex post facto design
 - The inability to manipulate independent variables
 - The lack of power to randomize
 - The risk of improper interpretation

Hypotheses

1. The final accumulative GPA of the Academic STARS is significantly higher than the final accumulative GPA of Non-Academic STARS African American students at KSU, when controlling for SAT score, gender, and High school GPA.
2. The retention of the Academic STARS students is significantly higher than the retention of Non-Academic STARS African American students at KSU, when controlling for SAT score, gender, and High school GPA.
3. The graduation rate of the Academic STARS students is significantly higher than the graduation rate of Non-Academic STARS African American students at KSU, when controlling for SAT score, gender, and High school.

Specific Questions Evaluated

1. Is there difference between groups (i.e., STARS and Non-STARS) in predicting retention, when considering SAT score, gender and high school GPA?
2. Is there difference between groups (i.e., STARS and Non-STARS) in predicting final college GPA, when considering SAT score, gender and high school GPA?
3. Is there difference between groups (i.e., STARS and Non-STARS) in predicting graduation, when considering SAT score, gender and high school GPA?
4. Is there a significant interaction between a student's group and gender in predicting retention?
5. Is there a significant interaction between a student's group and gender in predicting final college GPA?
6. Is there a significant interaction between a student's group and gender in predicting graduation?
7. Is there a significant interaction between a student's group and SAT score in predicting retention?
8. Is there a significant interaction between a student's group and SAT score in predicting final college GPA?
9. Is there a significant interaction between a student's group and SAT score in predicting graduation?

Data Collection and Analysis

- Total Sample N = 943 (1999, 2000, 2001 Cohorts)
 - STARS = 79
 - Non-STARS = 864
- STARS
 - Female = 60
 - Male = 19
- Non-STARS
 - Female = 551
 - Male = 313

Data Collection and Analysis

- An F test was used to determine the R^2 of the various relationships are significantly different at an alpha of .05.
- Multiple linear regression was chosen because of its flexibility, as compare to traditional analysis of variance.
- Two-tailed test of significance was used to test the relationships, because the direction of the correlation was uncertain.

Findings

1. GROUP, independent of SAT score, high school GPA and gender, was found to be significant in predicting retention.
2. GROUP, independent of SAT score, high school GPA and gender, was found to be significant in predicting final accumulative GPA.
3. GROUP, independent of SAT score, high school GPA and gender, was not found to be significant in predicting graduation.
4. There was no significant interaction found.

Conclusions, Implications, and Recommendations

- **Conclusions:**
 - More likely to be retained from fall semester to the following fall semester than Non-Academic STARS African American students living on campus who entered the university as first-time full-time freshmen from the 1999 to 2001.
 - More likely to have a higher final accumulative grade point average, than Non-Academic STARS African American students living on campus who entered the university as first-time full-time freshmen from the 1999 to 2001.
 - Less likely to have graduated from the university by the 2003 spring semester, than non-STARS African American students living on campus who entered the university as first-time full-time freshmen from the 1999 to 2001.

Conclusions, Implications, and Recommendations

- Conclusion - Less likely to have graduated from the university by the 2003 spring semester.
- Graduation Rates:
 - 1995 Cohort - 57% (STARS) / 42% (KSU Overall)
 - 1996 Cohort - 63% (STARS) / 46% (KSU Overall)

Based on the results of this study, it is concluded that students who have experienced the KSU Academic STARS African-Centered rites of passage process have performed better academically, as evident by significant increases in final accumulative grade point average and retention, and increase graduation rate, than their peers who have not experienced Academic STARS

Conclusions, Implications, and Recommendations

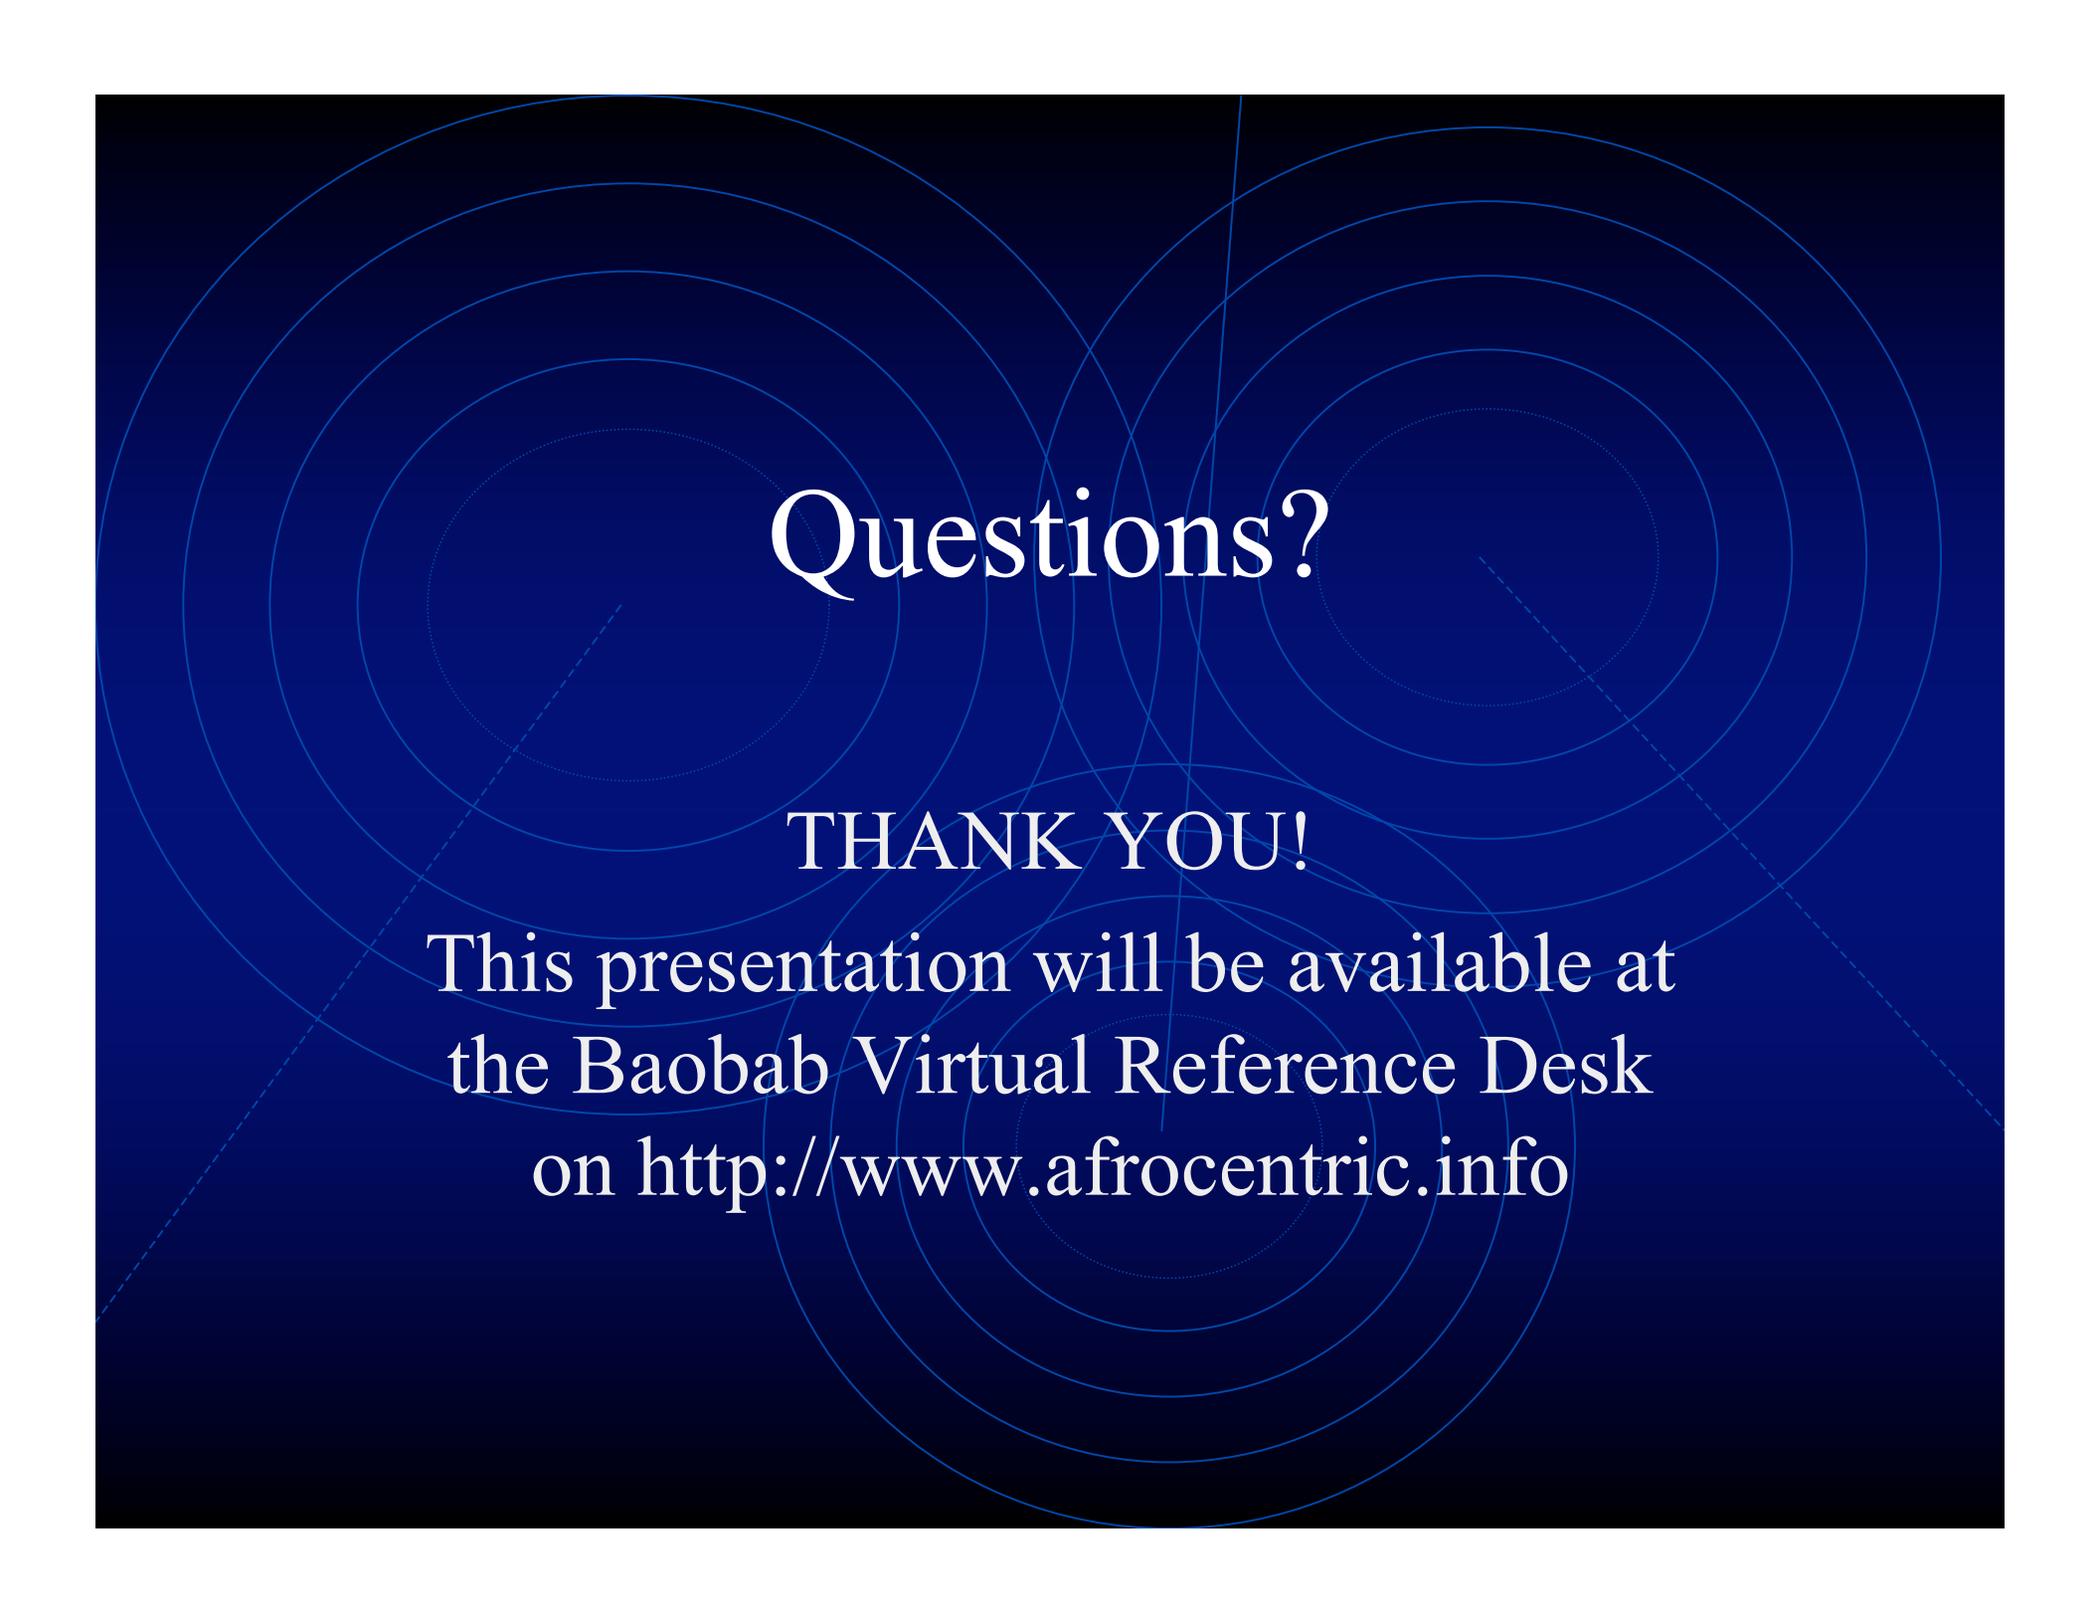

Implications

- The findings of this study indicate that the use of the Academic STARS African-Centered rites of passage model to deliver educative services and programs is effective.
- The results of this study support research that emphasizes the importance of providing African American college students, particularly in predominantly white institutions, with opportunities to develop an authentic sense of self and social networking skills.

Conclusions, Implications, and Recommendations

Recommendations

- Further research on the use of the rites of passage process as a model for retaining and graduating African American college students.
 - A study of the meaning students associate the Academic S TARS experience, and how those meanings influence their college experience.
 - A study be conducted to examining if there is a relationship between high African Self-Consciousness and resiliency within the Academic STARS participants. Moreover, can high African Self-Consciousness predict resiliency.
